

PRESS RELEASE

February 2020

embedded award 2020 – and the nominees are...

The embedded award is presented for highly innovative products and developments in the categories hardware, software, tools, embedded vision and start-ups. For the first time this year, there will also be an award in the category safety & security. For the 16th time in succession, a jury of industry experts will reward outstanding development achievements on the first day of the fair, which this year falls on 25 February. The coveted awards will be presented as part of the international press tour.

There are only a few days and hours left until this year's winners and their cutting-edge ideas and developments will be announced. The professional jury consisting of embedded sector experts and researchers has carefully scrutinised the large number of excellent submissions before reaching an independent verdict. "We are delighted by the many innovative and promising ideas that are submitted to the competition by the embedded community year after year. In 2020, we once again received a wealth of outstanding ideas and cutting-edge products for consideration. As in previous years, the contenders have not made it easy for us to decide on the nominees. We are really looking forward to announcing the winners on the first day of the show. Without giving too much away we can reveal that three of the winners come from the safety & security environment, which underlines the importance of this sector," says Professor Axel Sikora, chair of the jury, the embedded world exhibition advisory committee and the embedded world conference steering board.

The following companies have been nominated in the **categories hardware, software, embedded vision, tools and start-ups, and in the new category safety & security:**

Veranstalter Konferenzen**Conference organizer**

WEKA FACHMEDIEN GmbH
Richard-Reitzner-Allee 2
85540 Haar b. München, Germany
