

## Technical requirements BIOFACH/VIVANESS 2021 eSPECIAL / Jitsi

- ☑ Please have a look at all the important **technical requirements** for the platform and also feel free to forward this information to your IT in the run-up to the event: [Overview technical requirements](#)

- ☑ **IMPORTANT: Test the communication tool Jitsi in advance:** <https://08.meet.talque.com>

**Tip:** Start a test call with your colleagues in advance - the tool is the basis for all 1:1 video calls or direct video calls on the platform. If your company's firewall hinders the use of the tool, you can have Jitsi unlocked by your IT!

**Note:** in Jitsi NO virtual backgrounds can be set. Jitsi is the communication tool for all Direct Videocalls and 1:1 or group calls, NOT for RoundTables. With Jitsi it is recommended to share videos via links in the chat instead of playing them directly via screensharing - otherwise the quality may be slightly reduced.

- ☑ **Browser:** preferably use **Mozilla Firefox** and **Google Chrome**, because with other browsers the platform is partly not fully supported.
- ☑ Our tip: save the **platform as a favorite**, then you have easy access at any time!
- ☑ In order to give you the chance **to test the platform with Jitsi before** the eSPECIAL, the call function is already unlocked for everyone from 15.02.2021. This gives you the opportunity to also test live video calls within the platform in advance. By the way, you do not need your own Jitsi-account to use Jitsi.
- ☑ Which tool is used at the BIOFACH/VIVANESS **congress**? The congress will be shown via live streams, so that there are no access restrictions. Selected contributions can be called up again as a recording from the next day and will also be available in the days after the trade fair.
- ☑ It is possible to synchronize your Google or Outlook **calendar** with the calendar of your events on the platform; appointment requests can also be sent to you by e-mail.
